Hands-On 4-3

Ethernet – LwIP UDP Echo Client

Dr. LIAW Hwee Choo

Department of Electrical and Computer Engineering

DigiPen Institute of Technology Singapore

HweeChoo.Liaw@DigiPen.edu

Hands-On LwIP UDP Echo Client

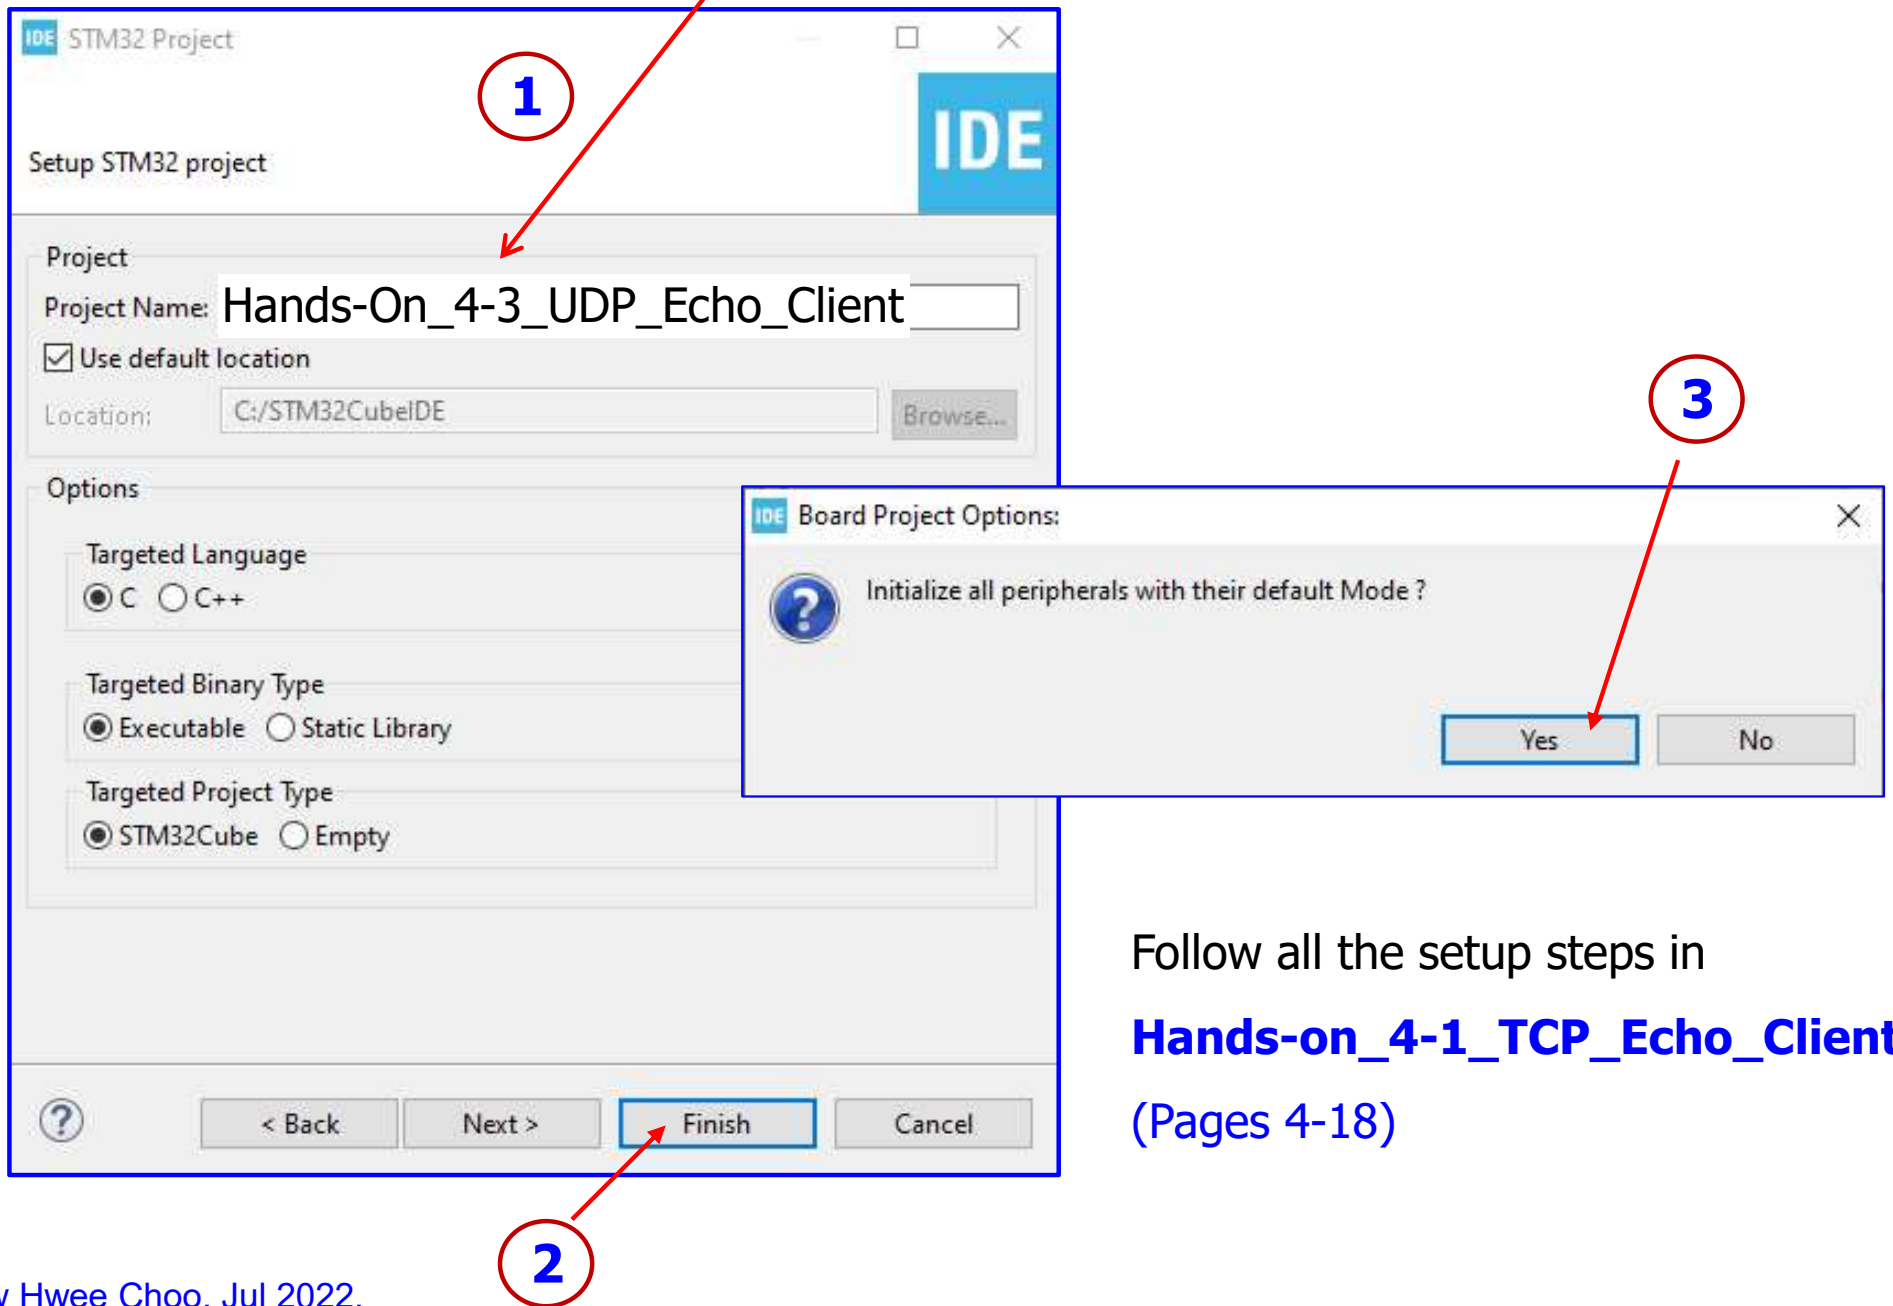

Objectives

The aims of this hands-on session are to

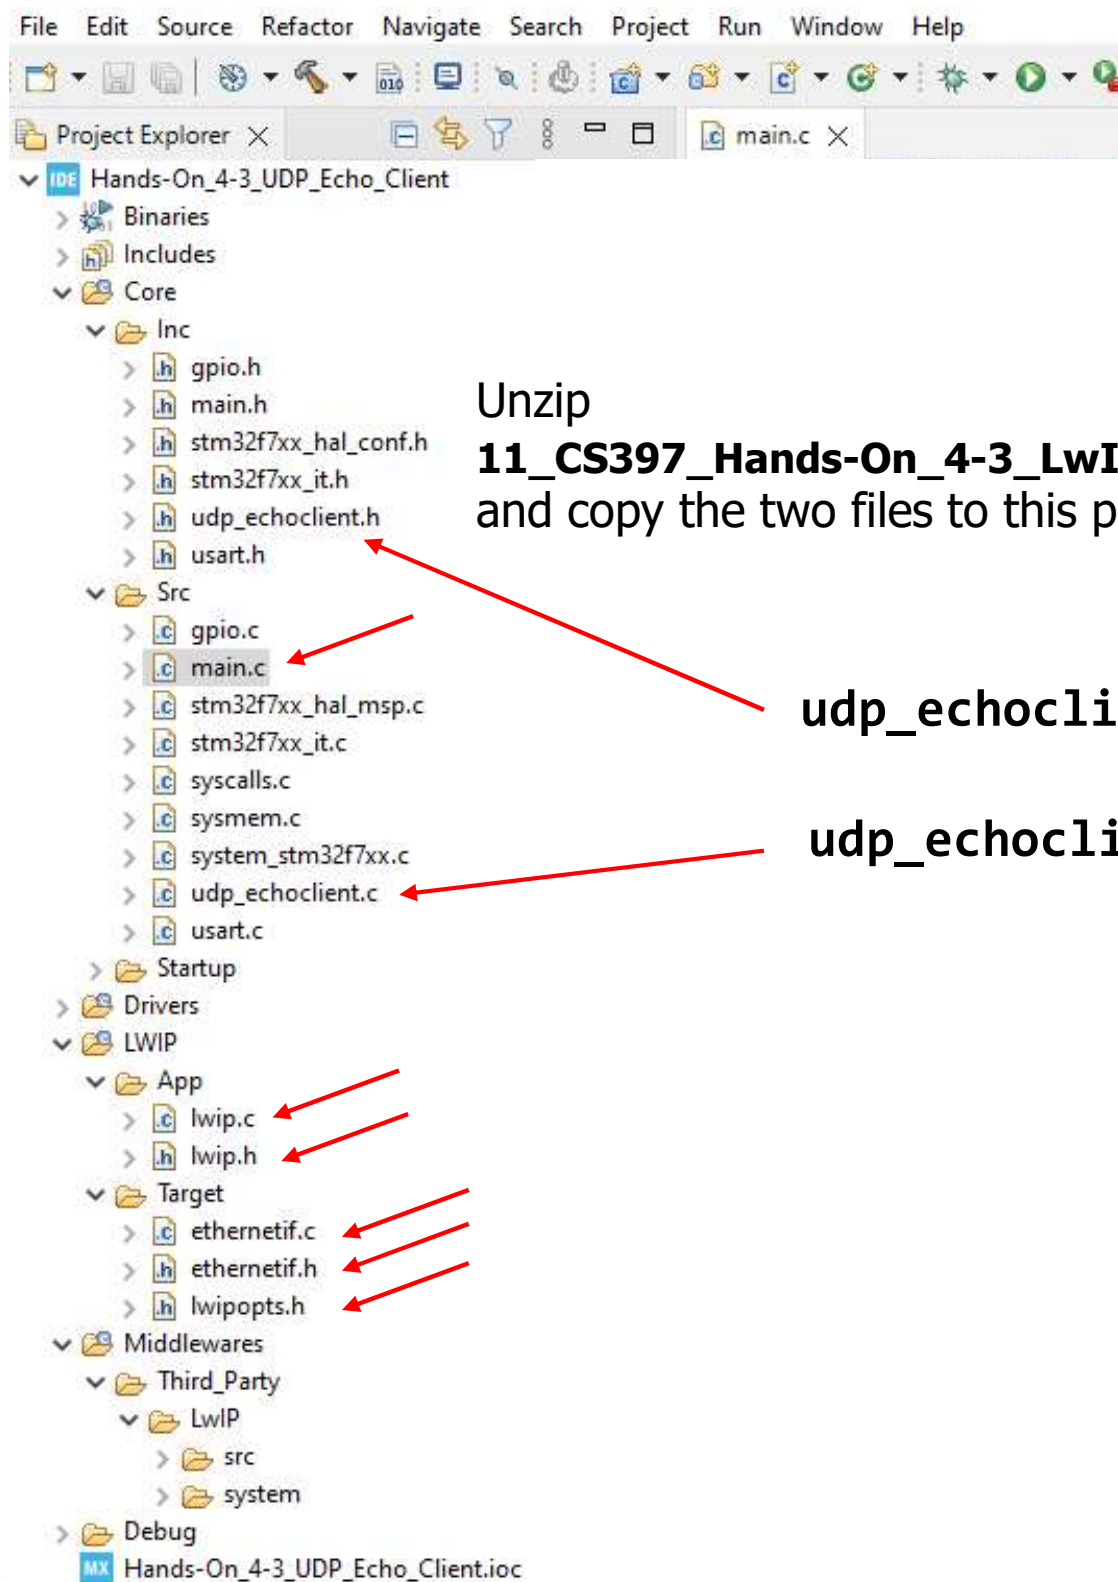

- implement a STM32 (STM32CubeIDE) project
- set up the Ethernet – LwIP UDP Echo Client application using STM32F767 microcontroller
- configure and program the Ethernet peripheral to make the microcontroller as a UDP client that connects to a UDP server
- test the developed program using the echotool.exe software
- build up the knowledge of Ethernet application development
 - Run [STM32CubeIDE](#)
 - [Select workspace: C:\STM32_CS397](#)
 - [File -> Close All Editors](#)
 - Start a [New STM32 Project](#)
 - Select the [Nucleo-F767ZI Board](#)

Hands-On LwIP UDP Echo Client

Enter Project Name: **Hands-On_4-3_UDP_Echo_Client**

Follow all the setup steps in
Hands-on_4-1_TCP_Echo_Client
(Pages 4-18)

Unzip

11_CS397_Hands-On_4-3_LwIP_udp_echoclient.zip,
and copy the two files to this project:

udp_echoclient.h

udp_echoclient.c

Hands-On LwIP UDP Echo Client

Add Code to **main.c**

```
/* Private includes */
/* USER CODE BEGIN Includes */
```

```
#include "udp_echoclient.h" 
```

```
/* USER CODE END Includes */
```

```
/* USER CODE BEGIN 2 */
```

```
udp_echoclient_connect(); 
```

```
/* USER CODE END 2 */
```

```
/* Infinite loop */
```

```
/* USER CODE BEGIN WHILE */
```

```
while (1)
```

```
{
```

```
    MX_LWIP_Process(); 
```

```
    /* USER CODE END WHILE */
```

```
    /* USER CODE BEGIN 3 */
```

```
}
```

```
/* USER CODE END 3 */
```

```
}
```

```
/* USER CODE BEGIN 4 */ 
```

```
void HAL_GPIO_EXTI_Callback(uint16_t GPIO_Pin)
```

```
{
```

```
    if(GPIO_Pin == GPIO_PIN_13)
```

```
{
```

```
        HAL_GPIO_TogglePin(GPIOB, LD2_Pin);
```

```
        udp_echoclient_send();
```

```
}
```

```
}
```

```
/* USER CODE END 4 */
```

Purpose and Test procedure:

UM1713 User manual

Developing applications on STM32Cube
with LwIP TCP/IP stack

Section 6 Using the LwIP applications

6.1.3 UDP Echo Client

Hands-On LwIP UDP Echo Client

Modify Code in `udp_echoclient.c`

```
/* Includes */
#include "main.h"
#include "lwip/pbuf.h"
#include "lwip/udp.h"
#include "lwip/tcp.h"
#include <string.h>
#include <stdio.h>
#include "udp_echoclient.h"
```

```
#define DEST_IP_ADDR0    (uint8_t)192
#define DEST_IP_ADDR1    (uint8_t)168
#define DEST_IP_ADDR2    (uint8_t)1
#define DEST_IP_ADDR3    (uint8_t)175
```

```
#define UDP_SERVER_PORT    7    /* define the UDP local connection port */
#define UDP_CLIENT_PORT    7    /* define the UDP remote connection port */
```

For a different router (gateway):

```
#define DEST_IP_ADDR0    (uint8_t)192
#define DEST_IP_ADDR1    (uint8_t)168
#define DEST_IP_ADDR2    (uint8_t)50
#define DEST_IP_ADDR3    (uint8_t)175
```

Ensure these lines are defined
(your PC IP address)

Hands-On LwIP UDP Echo Client

Generated Code in Lwip.c

```
/* LwIP initialization function */
```

```
void MX_LWIP_Init(void)
```

```
{
```

```
    /* IP addresses initialization */
```

```
    IP_ADDRESS[0] = 192;
```

```
    IP_ADDRESS[1] = 168;
```

```
    IP_ADDRESS[2] = 1;
```

```
    IP_ADDRESS[3] = 205;
```

```
    NETMASK_ADDRESS[0] = 255;
```

```
    NETMASK_ADDRESS[1] = 255;
```

```
    NETMASK_ADDRESS[2] = 255;
```

```
    NETMASK_ADDRESS[3] = 0;
```

```
    GATEWAY_ADDRESS[0] = 192;
```

```
    GATEWAY_ADDRESS[1] = 168;
```

```
    GATEWAY_ADDRESS[2] = 1;
```

```
    GATEWAY_ADDRESS[3] = 1;
```

```
/* USER CODE BEGIN IP_ADDRESSES */
```

```
/* USER CODE END IP_ADDRESSES */
```

```
/* Initialize the LwIP stack without RTOS */
```

```
lwip_init();
```

```
/* IP addresses initialization without DHCP (IPv4) */
```

```
IP4_ADDR(&ipaddr, IP_ADDRESS[0], IP_ADDRESS[1], IP_ADDRESS[2], IP_ADDRESS[3]);
```

```
IP4_ADDR(&netmask, NETMASK_ADDRESS[0], NETMASK_ADDRESS[1], NETMASK_ADDRESS[2], NETMASK_ADDRESS[3]);
```

```
IP4_ADDR(&gw, GATEWAY_ADDRESS[0], GATEWAY_ADDRESS[1], GATEWAY_ADDRESS[2], GATEWAY_ADDRESS[3]);
```

```
/* add the network interface (IPv4/IPv6) without RTOS */
```

```
netif_add(&netif, &ipaddr, &netmask, &gw, NULL, &ethernetif_init, &ethernet_input);
```

For a different router (gateway):

```
IP_ADDRESS[0] = 192;
```

```
IP_ADDRESS[1] = 168;
```

```
IP_ADDRESS[2] = 50;
```

```
IP_ADDRESS[3] = 205;
```

```
NETMASK_ADDRESS[0] = 255;
```

```
NETMASK_ADDRESS[1] = 255;
```

```
NETMASK_ADDRESS[2] = 255;
```

```
NETMASK_ADDRESS[3] = 0;
```

```
GATEWAY_ADDRESS[0] = 192;
```

```
GATEWAY_ADDRESS[1] = 168;
```

```
GATEWAY_ADDRESS[2] = 50;
```

```
GATEWAY_ADDRESS[3] = 1;
```

Hands-On LwIP UDP Echo Client

Testing of the Application – LwIP UDP Echo Client

This application is used to test basic UDP echo connections. The STM32 MCU acts as a UDP client that connects to a UDP server.

To test the UDP echo client application, follow these steps:

1. Build and program the project code into the STM32F767ZI Flash memory.
2. On the remote PC, open a command prompt window and go to **c:\CS397**
3. At the command prompt, enter:
C:\CS397>echotool /p udp /s
where:
 - /p udp is the protocol (UDP protocol)
 - /s is the actual mode of connection (Server mode)
4. When the user-button on the board (Nucleo-F767ZI) is pressed, LD2 is toggled, and the client (board) sends a string and the server (PC) echoes back the same string to the client.

Hands-On LwIP UDP Echo Client

Note:

1. Create another application with the dynamic address allocation "DHCP" for testing.
2. For "DHCP" application, check the router or "Advanced IP Scanner" for the board IP and PC addresses if needed.
3. Figure shows an example of the command string and the module response.

Need to press the user-button to get the response/echo.

```
Command Prompt - echotool /p udp /s

C:\CS397>ping 192.168.1.205

Pinging 192.168.1.205 with 32 bytes of data:
Reply from 192.168.1.205: bytes=32 time=9ms TTL=255
Reply from 192.168.1.205: bytes=32 time=3ms TTL=255
Reply from 192.168.1.205: bytes=32 time=2ms TTL=255
Reply from 192.168.1.205: bytes=32 time=4ms TTL=255

Ping statistics for 192.168.1.205:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 2ms, Maximum = 9ms, Average = 4ms

C:\CS397>ping 192.168.1.175

Pinging 192.168.1.175 with 32 bytes of data:
Reply from 192.168.1.175: bytes=32 time<1ms TTL=128
Reply from 192.168.1.175: bytes=32 time<1ms TTL=128
Reply from 192.168.1.175: bytes=32 time<1ms TTL=128
Reply from 192.168.1.175: bytes=32 time<1ms TTL=128

Ping statistics for 192.168.1.175:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 0ms, Average = 0ms

C:\CS397>echotool /p udp /s

Waiting for UDP connction on port 7. Press any key to exit.
